

Behind the scenes

What's going on when you decide to design a dashboard?

defining questions

- how was sales affected monthly?
- what are the most and least profitable product
- what is the actual revenue from sold orders and the gap between it and total revenue from all orders?
- what products are mostly late to be delivered?
- which region is mostly late to deliver?
- how many orders are there each month?
- what are the returned products across categories and what are their counts?
- What is the highest region by orders?
- What is the most preferred payment method?

Main KPIs

- Total revenue (per order)
- Net revenue (only sold orders)
- Total orders
- Avg revenue by order
- Avg cost by order
- Delayed orders
- Avg delivery time
- Delayed region
- Refunded orders
- Return rate

Analysis & Reporting

Executive summary

- 'West' has the highest numbers of orders; however, it is the most delayed region
- Return rate is close to 10% which means approximately 1000 orders were returned
- highly ordered product is "sunscreen", while "Hydrating moisturizer" shared highest revenue (sold and not returned)
- Total revenue by order is about 162M, while orders that already sold make about 40.8M, indicating a significant gap.
- Most products were returned because they were damaged

Recommendations

- Optimize delivery operations in the West region to reduce delays and improve customer satisfaction.
- Reduce product damage through better packaging and stricter quality control processes.
- Reduce average delivery time by optimizing shipping and fulfillment operations or change shipping companies.
- Focus marketing and stock availability on high-revenue products such as Hydrating Moisturizer and Sunscreen.
- Reduce operational and fulfillment costs to improve overall profitability.
